LeetCode Portfolio

Professional Summary

Backend Developer skilled in Spring Boot, Spring Security, REST APIs, MongoDB, MySQL, Redis, and JWT authentication. Experienced in building scalable backend systems, secure authentication workflows, geospatial querying, caching mechanisms, and AI-integrated applications.

Education

Graphic Era Hill University, Dehradun

2023 – 2027

B.Tech CSE Specialization in AI & ML

Class XII (CBSE)

2022

Mnemonic Convent Sr. Sec. School, Haldwani

Class X (CBSE)

2020

Mnemonic Convent Sr. Sec. School, Haldwani

Technical Skills

Languages: Java, Python, C, SQL

Backend: Spring Boot, Spring Security, REST APIs, JWT, OAuth2, Redis, Swagger/OpenAPI

Frontend: HTML, CSS, JavaScript

Databases: MySQL, MongoDB

Tools: Git, GitHub, Maven, Postman

Projects

CIVICA – AI Powered Civic Issue Reporting Platform

Tech Stack: Java, Spring Boot, Spring Security, MongoDB, Redis, YOLOv8

- Developed 10+ REST APIs for civic issue reporting, authentication, workflow tracking, and issue management using Spring Boot.
- Implemented Spring Security with JWT authentication and role-based authorization across multiple secured backend endpoints.
- Integrated Redis caching to reduce repeated database queries and improve API response efficiency.
- Designed MongoDB geospatial querying for optimized nearby issue detection and location-based filtering.
- Built YOLOv8-based object detection pipeline capable of classifying 3 civic issue categories including potholes, garbage, and waterlogging.
- Designed duplicate issue detection logic and workflow management system supporting 3 issue states: OPEN, IN_PROGRESS, and RESOLVED.
- Implemented Swagger/OpenAPI documentation across multiple REST endpoints to simplify API testing and integration workflows.

NoteSphere – Intelligent Journaling Backend System

Tech Stack: Java, Spring Boot, MongoDB, Redis, OAuth2

- Developed multiple secure journaling REST APIs using Spring Boot and layered backend architecture.
- Implemented JWT authentication, OAuth2 authorization flow, and Spring Security for secure user access management.
- Integrated Redis caching to minimize repeated database access during journal retrieval operations.
- Developed sentiment analysis and intelligent tagging features for personalized journal management.
- Implemented Swagger/OpenAPI integration for API visualization, testing, and endpoint documentation.
- Managed user-specific journal operations with optimized backend data handling workflows.

Virtual Experience

JPMorgan Chase & Co. Software Engineering Job Simulation – Forage

- Completed practical backend engineering and software development workflow tasks.
- Worked on REST APIs, integration workflows, and software engineering concepts.

Certifications

- AWS Cloud Essentials
- Complete Data Science, Machine Learning, DL, NLP Bootcamp – Udemy
- JPMorgan Chase & Co. Software Engineering Job Simulation – Forage

Achievements

- Participated in intra-college hackathon focused on software development and backend system design.
- Consistently practice Data Structures and Algorithms on LeetCode and coding platforms.
